<sup>1)</sup> These products were built as Class A devices. The use of these devices in residential areas could result in lead in radio interference. In this case these may be required to introduce additional interference suppression

 $<sup>^{2)}\,</sup>$  If two different conductor cross-sections are connected to one clamping point, both cross-sections must lie in the range specified. If identical crosssections are used, this restriction does not apply.

# Solid-State Switching Devices for Resistive Loads Solid-State Relays

 $<sup>^{1)}</sup>$   $I_{\rm max}$  provides information about the performance of the solid-state relay. The actual permitted rated operational current  $I_{\rm e}$  can be smaller depending on the connection method and cooling conditions.

Note: The required heat sinks for the corresponding load currents can be determined from the characteristic curves, page 4/20. The minimum thickness values for the mounting surface must be observed.

## Solid-State Switching Devices for Resistive Loads Solid-State Relays

3RF22 solid-state relays, 3-phase, 45 mm

#### Fused version with semiconductor protection (similar to type of coordination "2")1)

The semiconductor protection for the 3RF22 controls can be used with different protective devices. Siemens recommends the use of special SITOR semiconductor fuses. The table below lists the maximum permissible fuses for each 3RF22 control.

If a fuse is used with a higher rated current than specified, semiconductor protection is no longer guaranteed. However, smaller fuses with a lower rated current for the load can be used without problems.

| Order No.  | All-range fuses                  |                         | Semiconductor fuses / back-up fuses |                         |                         |                         |  |  |

# Suitable fuse holders, fuse bases and controls can be found in Catalog LV 1, Chapter 19.

<sup>1)</sup> Type of coordination "2" according to EN 60947-4-1: In the event of a short-circuit, the controls in the load feeder must not endanger persons or the installation. They must be suitable for further operation. For fused configurations, the protective device must be replaced.

<sup>&</sup>lt;sup>2)</sup> For use only with operational voltage  $U_{\rm e}$  up to 400 V.

<sup>3)</sup> These fuses have a smaller rated current than the solid-state relays.
